Welcome to Nexpring Health

Redefining the future of ART. Together.

The Nexpring Promise

Nexpring = Next + Spring

A fresh era in fertility care, committed to bringing new solutions that support your success and solve your everyday challenges.

Our Purpose:

Putting you, the embryologist, clinician, and fertility clinic, at the center of everything we do.

Who We Are:

Industry leaders united as one global force, delivering complete solutions, dedicated to advancing ART.

Powered by Nexpring Health

Confidence at Every Step,
Comprehensive ART Solutions.

Consumables →

ET catheters, glass pipettes, IUI catheters, polycarbonate pipettes, and OPU needles.

Media →

Culture media, oils, gamete and embryo handling solutions.

Capital Equipment →

Incubators, lasers, sperm analyzers, workstations, and lab infrastructure.

Services

Lab Build Solutions: Complete lab design, equipment sourcing, and implementation.

NexTech Global Support: Service plans, equipment maintenance, and technical support.

Nexperts Clinical Education: Clinical consultation, education, and expert guidance and community.

Diagnostic Imaging

Cook® Silicone Balloon HSG Catheter

View ordering information →

Used for delivery of contrast medium or saline into the uterine cavity and fallopian tubes for the evaluation of tubal patency using hysterosalpingography, or to access the uterine cavity for saline infusion sonohysterography. The balloon forms a seal at the internal cervical os to hold the saline or contrast medium in the uterus.

Product Description:

- Latex free.
- Sold in boxes of 10.
- Includes syringe.

Margolin HSG Cannula

View ordering information →

Used for the delivery of contract media or saline into the uterine cavity during hysterosalpingography (HSG) or sonohysterography (SHG) for examination of the uterus and fallopian tubes. When used for HSG, the Margolin HSG Cannula can be used for evaluation of tubal patency.

Product Description:

- The cannula is designed for patients with a stenotic external os and a narrow cervical canal.
- The silicone wedge at the distal tip is designed to occlude the external cervical os without trauma.

Goldstein Sonohysterography Catheter

View ordering information →

Used to access the uterine cavity for the delivery of saline for sonohysterography (SHG).

Product Description:

- The adjustable acorn-shaped positioner maintains catheter placement while reducing leakage of instilled saline at the external cervical os.
- The ink band provides a reference mark to indicate proper catheter positioning.
- The catheter's round, closed tip eases introduction into the uterus.
- The large oval sideport facilitates instillation of saline solution.

Goldstein SonoBiopsy™ Catheter

View ordering information →

Used to access the uterine cavity for sonohysterography and to obtain an endometrial biopsy, if indicated, using the same device.

Product Description:

- The adjustable acorn-shaped positioner maintains catheter placement while reducing leakage of instilled saline at the external cervical os.
- Ink marks in 1 cm gradations up to 10 cm indicate catheter positioning.
- The catheter's 7.2 French size allows it to pass into the uterus for tissue collection.
- The catheter's round, closed tip eases cervical passage.
- The large oval sideport facilitates instillation of saline solution and aspiration of endometrial tissue.

Soules Intrauterine Catheter

View ordering information →

Used to access the uterine cavity for saline infusion sonohysterography or for the introduction of washed spermatozoa into the uterine cavity.

Product Description:

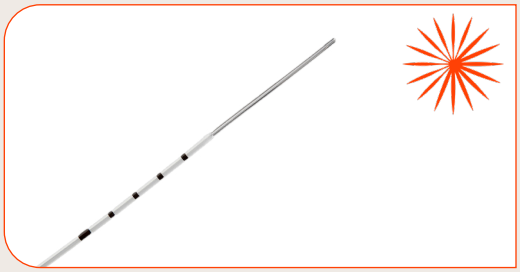

- The closed, rounded tip with side opening decreases the chance of the catheter becoming plugged when introduced.
- The adjustable positioner allows placement of the soft, flexible catheter within the uterus.

Intrauterine Insemination

Soft-Pass™ Coaxial Insemination Catheter

View ordering information →

Used for the introduction of washed spermatozoa into the uterine cavity.

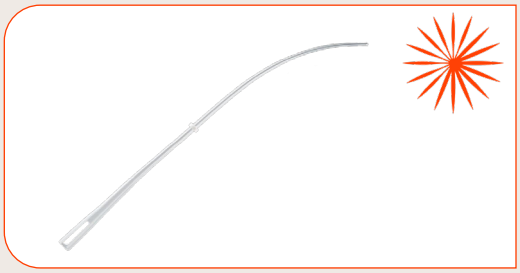

Product Description:

- The soft, flexible inner catheter eases placement.
- The rigid guide catheter facilitates positioning.
- The coaxial insemination catheter consists of a polyethylene guide catheter and a polyolefin inner catheter.

Insemi-Cath® Insemination Catheter

View ordering information →

Used for the introduction of washed spermatozoa into the uterine cavity.

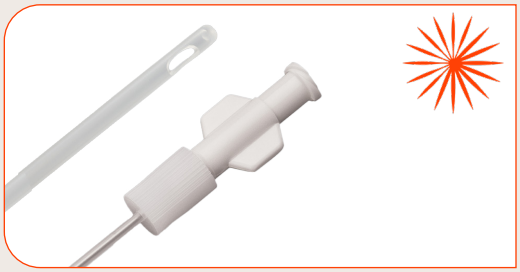

Product Description:

- Has a flared proximal end that is designed to affix to a standard Luer slip syringe.
- Made from nontoxic materials.
- Sold in boxes of 20.

Shepard Intrauterine Insemination Catheter Set

View ordering information →

Used for the introduction of washed spermatozoa into the uterine cavity.

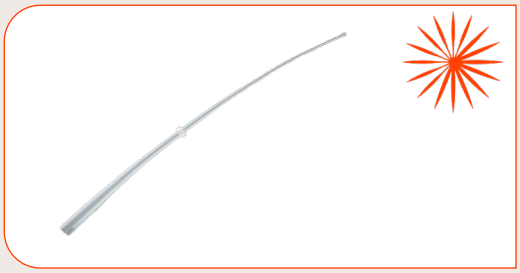

Product Description:

- The adjustable positioner allows the catheter to be placed within the uterus.
- The stainless steel inner cannula has a curved tip.
- Sold in boxes of 20.

Insemi-Cath® Flushing Catheter

View ordering information →

The Flushing Catheter is intended for instillation of sterile medium into the cervical canal prior to embryo transfer.

IUI

View ordering information →

Uterine Inseminator for washed spermatozoa.
Used for optimal sperm distribution.

Product Description:

- Positioner to prevent damage to fundus.
- Two lateral ports at distal end for optimal sperm distribution.
- Arrows on handle to indicate lateral ports at distal end.
- Markings on the outer tube.
- Handle with luer lock for a more secure fitting to syringes.

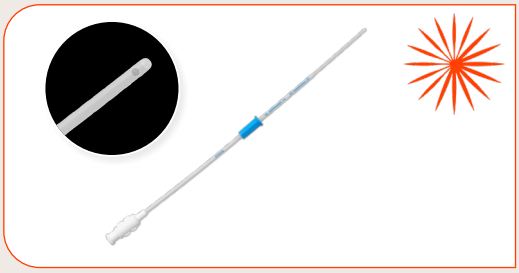

IUI Memo

View ordering information →

Uterine Inseminator for washed spermatozoa with memory function.

Product Description:

- Positioner to prevent damage to fundus.
- Two lateral ports at distal end for optimal sperm distribution.
- Arrows on handle to indicate lateral ports at distal end.
- Markings on the outer tube.
- Handle with luer lock for a more secure fitting to syringes.

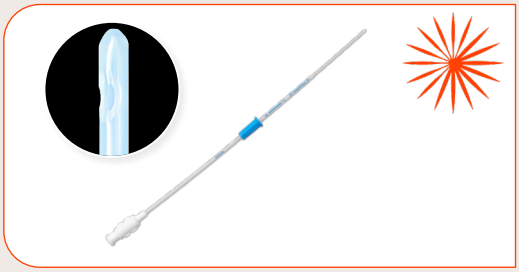

Smooze IUI

View ordering information →

Flexible intrauterine insemination cannula.

Product Description:

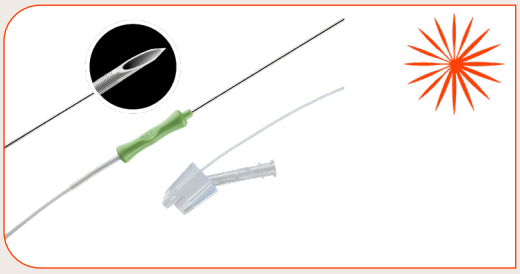

- Smooth tip with one distal side hole.
- Very flexible and therefore less traumatic.
- Handle with luer lock for a more secure fitting to syringes.

Oocyte Retrieval

Small Gage Ova-Stiff™ Ovum Aspiration Needle Single Lumen – OPS

View ordering information →

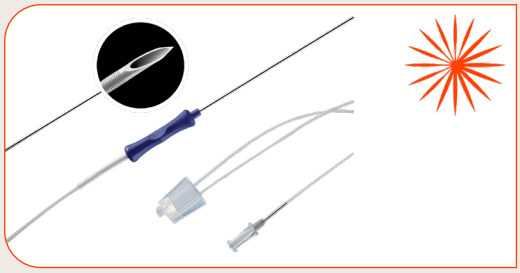

Used for laparoscopic or ultrasound-guided transvaginal aspiration of oocytes from ovarian follicles.

Product Description:

- The stopper accepts the tip of a Luer slip syringe to facilitate follicle flushing.
- EchoTip® technology enhances the visualization of the needle tip under ultrasound.

Ovum Aspiration Needle Single Lumen – OSN

View ordering information →

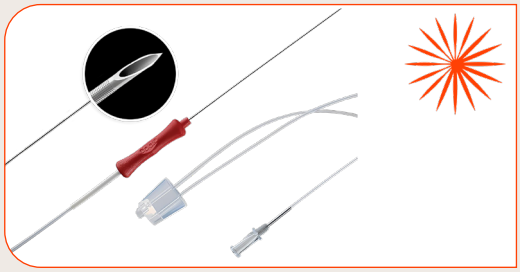

Used for ovum aspiration.

Product Description:

- The handle is designed to facilitate the rotation of the needle during aspiration. The thumb notch indicates the orientation of the bevel.
- EchoTip® technology enhances the visualization of the needle tip under ultrasound.

Ova-Stiff™ EchoTip® Single Lumen Ovum Aspiration Needle – OSN

View ordering information →

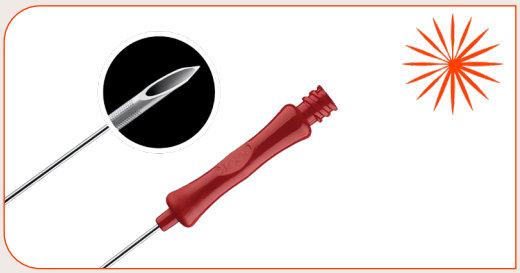

Used for laparoscopic or ultrasound-guided transvaginal aspiration and flushing of oocytes from ovarian follicles.

Product Description:

- The ergonomic handle provides comfort and control during use.
- EchoTip® technology enhances the visualization of the needle tip under ultrasound.

Ovum Aspiration Needle Single Lumen – OPAA

View ordering information →

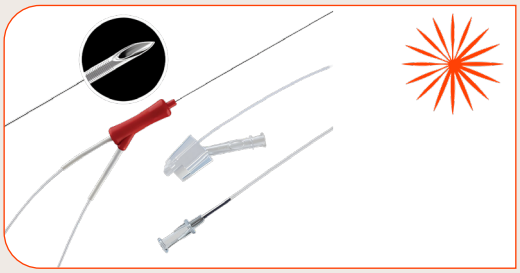

Used for ovum aspiration.

Product Description:

- The handle is designed to facilitate the rotation of the needle during aspiration. The thumb notch indicates the orientation of the bevel.
- The proximal hub has a Luer lock to accept syringes.
- EchoTip® technology enhances the visualization of the needle tip under ultrasound.
- The aspiration line is not included.

Cook® EchoTip® Double Lumen Aspiration Needle – OPSD

View ordering information →

Used for aspiration and flushing of oocytes from ovarian follicles.

Product Description:

- The double-lumen design allows simultaneous or intermittent flushing of media and aspiration from follicles.
- EchoTip® technology enhances the visualization of the needle tip under ultrasound.

Cook® Vacuum Pump

View ordering information →

Used to provide a low flow, regulated vacuum up to -500 mm Hg for general suction.

Product Description:

- A pedal activates the vacuum response at the needle tip.
- The pump maintains a constant vacuum at its set level.
- The boost button on the front panel increases the vacuum pressure to clear blockages in the ovum aspiration needle.
- A volume-adjustable tone indicates when vacuum is applied.
- The LED can display the vacuum pressure in mm Hg and kPa.
- This pump is not intended for use in emergency airway clearing.

Disposable Vacuum Line with Hydrophobic Filter

View ordering information →

Used to connect ovum aspiration needles to the Cook® Vacuum Pump to prevent contamination of the pump.

Cook® Test Tube Heater

View ordering information →

Used to maintain the temperature of egg (oocyte) collection tubes at or near body temperature. Designed to accept up to 6 Falcon® 2001 test tubes.

Product Description:

- The clear front panel allows continuous observation of the test tubes' contents.
- The heater uses 12V DC power.
- The heater is powered by the Power Supply (K-APS-300) provided with the unit.
- The heater maintains an operating temperature of 36.9 °C.
- The amber light on the front of the heater indicates that the unit is powered. When the light flashes, the heater is at its operating temperature.

Flexible Polycarbonate Pipettes

Cook® Flexipet® Pipette

View ordering information →

Flexible polycarbonate pipettes used for denuding as well as gamete and embryo manipulation.

Product Description:

- The flexible polycarbonate will not break or scratch dishes.
- The pipette containers are color coded according to size.

Cook® Flexipet® Adjustable Handle

View ordering information →

Used with Flexipet denuding and manipulation pipettes.

Product Description:

- The aspiration volume can be preset from 0.25 µL to 3.0 µL.
- The handle provides the fine control necessary for oocyte, embryo, and/or blastomere manipulation.
- The handle is adjustable to accept all sizes of Flexipet pipettes.

Gynetics Strip-ID Pipette

View ordering information →

The Strip-ID is a single-use IVF laboratory micropipette used for oocytes manipulation and handling of embryos and oocytes.

Product Description:

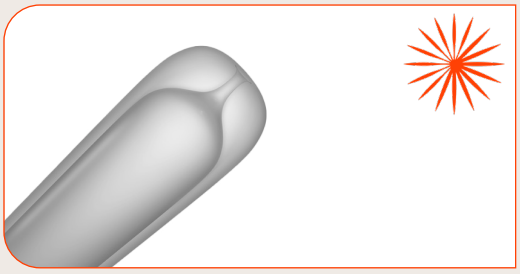

- Superior quality that ensures smooth edges for precise denudation.
- Strict individual microscopic quality inspection.
- Flexible, unbreakable material that will not scratch dishes.
- Convenient colour-coded multi-packaging that allows easy release of a single pipette.
- Extensive variety of sizes available to suit your application.
- Fits the “Pipet-ID(s)” and is compatible with most popular used micropipettors.

Glass Pipettes

Cook® Holding Pipette

View ordering information →

Used to hold the oocyte for intracytoplasmic sperm injection (ICSI) or the embryo for other micromanipulation techniques.

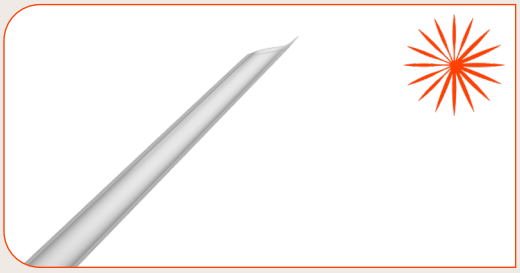

Product Description:

- The pipette is flame polished.
- The product is sold in boxes of 10.

Cook® Microinjection Pipette

View ordering information →

Used for the intracytoplasmic sperm injection (ICSI) of oocytes.

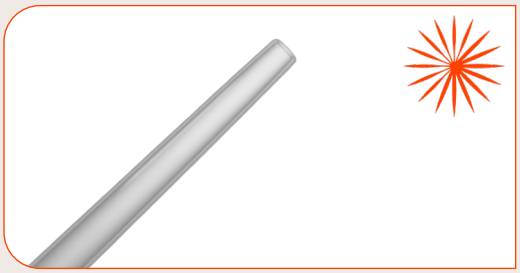

Product Description:

- The pipette is specifically designed for precise sperm control.
- The pipette has a well-defined bevel to puncture the zona pellucida.
- The product is sold in boxes of 10.

Cook® Embryo Biopsy Pipette

View ordering information →

Used for the aspiration of blastomeres or trophectoderm cells.

Product Description:

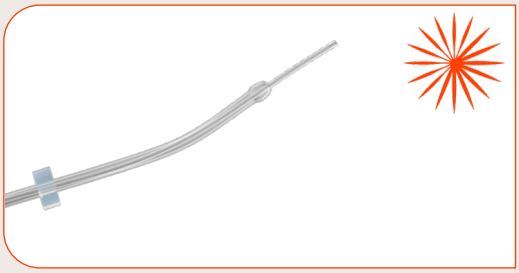

- The pipette tip is cut straight and flame polished until smooth.
- The parallel walls facilitate smooth aspiration.
- The product is sold in boxes of 10.

Embryo Transfer

Guardia™ Access Embryo Transfer Catheter

View ordering information →

Used to place in vitro fertilized (IVF) embryos into the uterine cavity.

Product Description:

- The guide catheter is curved to facilitate insertion.
- The guide catheter's rounded bulb tip eases passage through the cervix.
- The transfer catheter is soft and flexible.
- Microvol™ technology minimizes the volume of media that is required.
- The cervical stop comes set at 4 cm and can be adjusted to 5 cm.
- The catheters are packaged in separate sterile pouches.

Guardia™ AccessET Embryo Transfer Catheter

View ordering information →

Used to place in vitro fertilized (IVF) embryos into the uterine cavity.

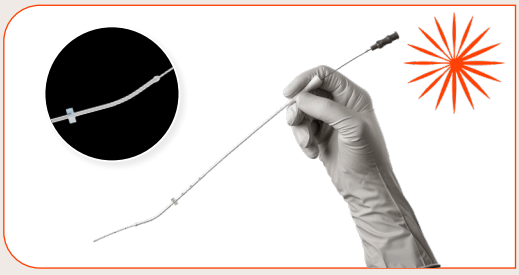

Product Description:

- The transfer catheter's echogenic tip improves visibility under ultrasound.
- The guide catheter is curved to facilitate insertion.
- The guide catheters rounded bulb tip eases passage through the cervix.

Guardia™ Access Nano Embryo Transfer Catheter

View ordering information →

Used to place in vitro fertilized (IVF) embryos into the uterine cavity.

Product Description:

- The transfer catheter has an internal support cannula.
- The guide catheter is curved to facilitate insertion.
- The guide catheters rounded bulb tip eases passage through the cervix.

Soft-Pass™ Embryo Transfer Catheter Set

View ordering information →

Used to place in vitro fertilized (IVF) embryos into the uterine cavity.

Product Description:

- The soft, flexible guide catheter is designed to facilitate placement of the set.
- Sets are available with transfer catheters that have an integrated stainless steel support cannula to aid catheter placement.

Soft-Pass™ Embryo Transfer Catheter Set with EchoTip®

View ordering information →

Used to facilitate placement of the set.

Product Description:

- Sets are available with transfer catheters that have an integrated stainless steel support cannula to aid catheter placement.
- The transfer catheter's EchoTip echogenic tip improves visibility under ultrasound.

Soft-Pass™ Embryo Mock Transfer Catheter Set with Echogenic Tip

View ordering information →

Used to facilitate placement of the set.

Product Description:

- The transfer catheter has a closed tip.
- The transfer catheter's echogenic tip improves visibility under ultrasound.

Pivet Embryo Transfer Catheter Set

View ordering information →

Used to place in vitro fertilized (IVF) embryos into the uterine cavity.

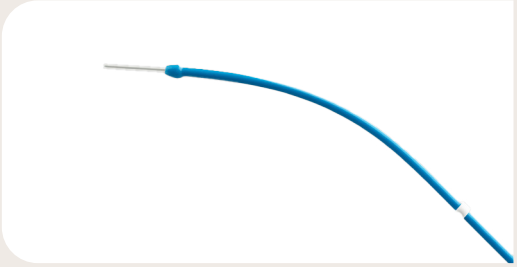

Product Description:

- The soft, flexible guide catheter is designed to follow the curves in the cervix in order to facilitate placement of the transfer catheter.
- The depth markings on the guide catheter aid in correct catheter placement.
- The soft 2.8 Fr transfer catheter features Microvol™ technology, which reduces the volume of medium that is required for embryo transfer.
- The integrated support cannula aids the placement of the transfer catheter.

Echosight® Jansen-Anderson Intratubal Transfer Set

View ordering information →

Used to inject either sperm, gametes, or embryos into the uterine ostium of the fallopian tube via ultrasound guidance.

Product Description:

- The catheters' Echosight material enhances visualization under ultrasound.
- The transfer catheter has a female Luer-lock adapter.

Guardia™ Obturator

View ordering information →

Used to supplement and assist uterine access of a cleared, dimensionally compatible embryo transfer device for placement of in vitro fertilized (IVF) embryos into the uterine cavity.

Product Description:

- The adjustable length works with a variety of Cook Medical and other embryo transfer catheters.
- The hub locks in place.

Guardia™ Access Malleable Obturator

View ordering information →

Used to supplement and assist uterine access of a cleared, dimensionally compatible embryo transfer device for placement of in vitro fertilized (IVF) embryos into the uterine cavity.

Product Description:

- Made to fit the standard Guardia Access Transfer Catheter.
- Malleable for maneuverability.

EMTRAC Delphin

View ordering information →

Introduction of embryos into the uterine cavity.

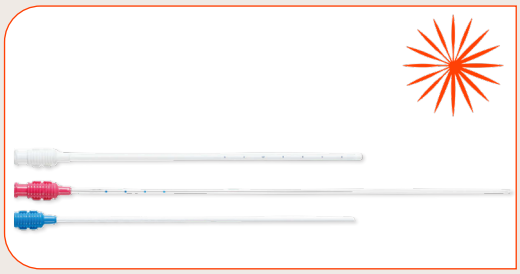

Product Description:

- Positioner to prevent damage to fundus.
- One piece catheter.
- Markings to indicate depth.
- Extra soft uterine catheter to ensure safe insertion through cervix.
- Handle with luer lock for a more secure fitting to syringes.

EMTRAC Set

View ordering information →

Introduction of embryos into the uterine cavity.

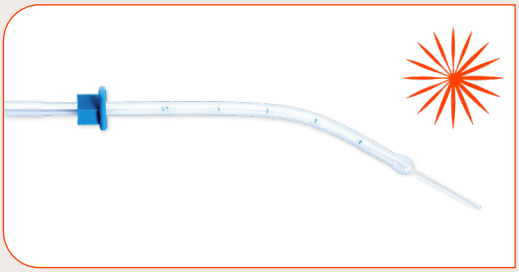

Product Description:

- Positioner for depth adjustment.
- A combination of a soft, flexible intrauterine catheter and a solid cervix catheter.
- Markings on outer tube for easy positioning.
- Soft loading catheter to minimize trauma.
- Handle with luer lock for a more secure fitting to syringes.

The Tulip

View ordering information →

Introduction of embryos into the uterine cavity.

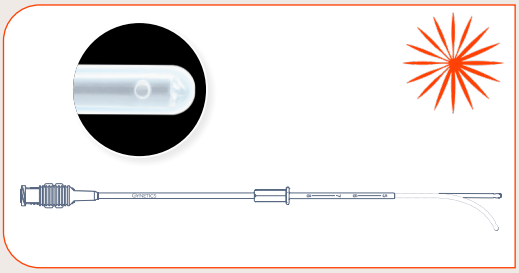

Product Description:

- Preshaped guiding catheter, ideally curved for easy entry when uterus is flexed.
- The Tulip tip enables easy atraumatic entry through the cervical canal.
- Positioner for depth adjustment.
- Markings on outer tube for easy positioning.
- Handle with luer lock fitting for a more secure connection to syringes.
- Reinforced metal support of loading catheter for optimal control.
- Arrow marking on outer tube for curve indication.

The Tulip Memo

View ordering information →

Set for difficult cervical passage.

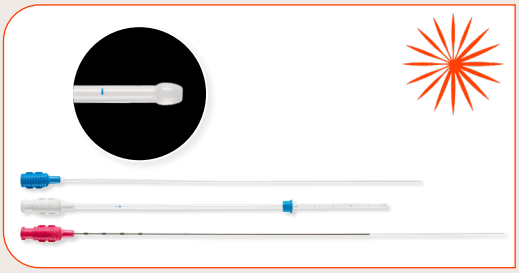

Product Description:

- The Tulip tip enables easy atraumatic entry through the cervical canal.
- Mandrel available for extra difficult transfers.
- Positioner for depth adjustment.
- A combination of a soft, flexible intrauterine catheter and a solid cervix catheter with memory.
- Markings on outer tube for easy positioning.
- Memo function of the guiding catheter.
- 5 free mandrels to preshape the guiding catheter in every box of 25 pieces.
- Handle with luer lock for a more secure connection to syringes.
- Reinforced metal support of loading catheter for optimal control.

The Tulip S

View ordering information →

Set for difficult cervical passage.

Product Description:

- Preshaped guiding catheter, ideally curved for easy entry when uterus is flexed.
- The Tulip tip enables easy atraumatic entry through the cervical canal.
- Positioner for depth adjustment.
- Markings on outer tube for easy positioning.
- Handle with luer lock fitting for a more secure connection to syringes.
- Reinforced metal support of loading catheter for optimal control.
- Arrow marking on outer tube for curve indication.

Vitrification Device

cryo-GO Vitrification Device

View ordering information →

cryo-GO is a simple and efficient cryopreservation device intended for use in vitrification procedures to contain and maintain human oocytes (MII), pronuclear (PN) zygotes through day 3 cleavage stage embryos and blastocyst stage embryos. Developed with a modern design and unparalleled quality, cryo-GO seamlessly integrates with existing workflows.

Product Description:

- Every device undergoes complete visual and microscopic inspection aided by Artificial Intelligence
- Tapered tip to limit breakage from the body
- Enhanced sample visibility with a streak-free loading area
- Available in a variety of colors and bundle sizes for ordering flexibility.
  - Made in Blue, Green, Purple, Red, and Yellow
  - Pack of 10 – individually wrapped
  - Pack of 50 – 5 devices per bundle
