Welcome to Nexpring Health

Redefining the future of ART. Together.

The Nexpring Promise

Nexpring = Next + Spring

A fresh era in fertility care, committed to bringing new solutions that support your success and solve your everyday challenges.

Our Purpose:

Putting you, the embryologist, clinician and fertility clinic, at the center of everything we do.

Who We Are:

Industry leaders united as one global force, delivering complete solutions, dedicated to advancing ART.

Confidence at Every Step,
Comprehensive ART Solutions.

Consumables →

ET catheters, glass pipettes, IUI catheters, polycarbonate pipettes and OPU needles.

Media →

Culture media, oils, gamete and embryo handling solutions.

Capital Equipment →

Incubators, lasers, sperm analysers, workstations, and lab infrastructure.

Services

Lab Build Solutions: Complete lab design, equipment sourcing and implementation.
NexTech Global Support: Service plans, equipment maintenance, and technical support.
Nexperts Clinical Education: Clinical consultation, education and expert guidance and community.

Confidence Built Into Every Batch

*Critical raw materials individually tested for bioburden and endotoxin

Tested Safety

Batches tested for:

- √ Function and Safety (MEA, HSSA)
- √ Sterility
- √ Endotoxin per USP standards

Trusted Quality

Stringent quality system compliant with

- √ ISO 13485
- √ USA FDA, MDSAP, and European Medical Device Regulations
- √ Good Manufacturing Practices (cGMP)

Consistent Excellence

Dependability through verification

- √ Individual raw material testing
- √ Certificate of Analysis available
- √ In process and finished good testing

Fertilisation & Embryo Culture

Continuous Single Culture (CSCM)

View ordering information →

Intended for use as a culture medium for human gametes and embryo manipulation, fertilisation through day 5/6 of development in vitro, when used in assisted reproductive technology (ART) procedures.

Product Description:

- Optimised for use in an uninterrupted culture system without dish change or medium renewal
- Contains 10 µg/mL of gentamicin sulfate
- Requires protein supplementation

Continuous Single Culture Complete (CSCM-C)

View ordering information →

Intended for use as a culture medium for human gametes and embryo manipulation, fertilisation through day 5/6 of development *in vitro*, when used in assisted reproductive technology (ART) procedures.

Product Description:

- Optimised for use in an uninterrupted culture system without dish change or medium renewal
- Contains 10 µg/mL of gentamicin sulfate
- Contains 5 mg/mL of Human Serum Albumin (HSA)

Continuous Single Culture-NX (CSCM-NX)

View ordering information →

Intended for use as a culture medium for human gametes and embryos from fertilisation through day 5/6 of development *in vitro*, when used in assisted reproductive technology (ART) procedures.

Product Description:

- A clinically proven, low-lactate, single-step culture medium that helps improve blastocyst development. CSCM-NX is designed for fertilisation and embryo culture through day 5/6 of embryo development. This medium is optimised to be used in an uninterrupted culture system, without dish change or medium renewal.
- Contains 10 µg/mL of gentamicin sulfate.
- Requires protein supplementation.
- Phenol red free.

Contact your rep →

Continuous Single Culture-NX Complete (CSCM-NXC)

View ordering information →

Intended for use as a culture medium for human gametes, zygotes and embryo manipulation, fertilisation through day 5/6 of development in vitro, when used in assisted reproductive technology (ART) procedures.

Product Description:

- A clinically proven, low-lactate, single-step culture medium that helps improve blastocyst development.
- Contains 10 µg/mL of gentamicin sulfate
- Contains 5 mg/mL of Human Serum Albumin (HSA)
- Phenol red free

GM501 Cult

View ordering information →

Ready-to-use bicarbonate-buffered culture media, designed for fertilisation and for human embryo culture from day 1 to blastocyst stage. It can also be used for embryo transfer. GM501 Cult comes in a variety of options:

- GM501 Cult with Gentamicin
- GM501 Cult with Gentamicin and Phenol Red

Product Description:

- Contains 10 g/Liter of Human Serum Albumin
- Contains 10 mg/Liter of gentamicin sulfate

Contact your rep →

Sperm Processing & Handling

ISolate

View ordering information →

Intended for assisted reproductive procedures that involve the manipulation of human sperm. ISolate is intended for the separation of the motile fraction of sperm from seminal fluid.

Product Description:

A density gradient medium designed to separate the motile fraction of the sperm from seminal fluid. As a two-layer gradient system (50% upper layer and 90% lower layer), it effectively reduces cellular contaminants such as dead sperm, white blood cells, and miscellaneous debris. The resulting sample contains predominantly motile sperm.

ISolate Stock Solution

View ordering information →

Intended for assisted reproductive procedures that involve the manipulation of human sperm. ISolate is intended for the separation of the motile fraction of sperm from seminal fluid.

Product Description:

A 90% density gradient medium used for single-layer sperm separation or as the lower layer of a customised gradient developed by the end user based on the semen quality. ISolate effectively reduces cellular contaminants such as dead human sperm, white blood cells, and miscellaneous debris. The resulting sample contains predominantly motile human sperm.

GM501 Gradient 45%/90%

View ordering information →

Ready-to-use gradient system for semen preparation. GM501 Gradient 45% and 90% can be used in combination with IUI, IVF and ICSI.

GM501 Gradient 100%

View ordering information →

Stock solution for semen preparation. It is an isotonic gradient for semen preparation with a density of approximately 1.12 g/ml. GM501 Gradient 100 % can be used in combination with IUI, IVF and ICSI.

Contact your rep →

Sperm Washing Medium

View ordering information →

Intended to be used for washing human sperm during assisted reproductive technology (ART) procedures.

Product Description:

- Sperm Washing Medium with Human Serum Albumin (HSA) is indicated for use on human spermatozoa during ART procedures which includes human gamete and embryo manipulation.
- Contains 5 mg/mL Human Serum Albumin (HSA).

GM501 SpermAir

View ordering information →

Ready-to-use medium designed for all human sperm-preparation (e.g. density gradient centrifugation), sperm-washing and swim-up techniques as well as for testicular tissue. Contains higher glucose concentration.

GM501 SpermActive

View ordering information →

Ready-to- use medium designed for all human sperm preparation, sperm washing and swim up techniques like density-gradient centrifugation as well as for testicular tissue.

Polyvinylpyrrolidone (PVP) with HSA – 7%

View ordering information →

Intended for immobilising human sperm to facilitate intracytoplasmic sperm injection (ICSI) when used in assisted reproductive technology (ART) procedures.

Product Description:

- A viscous solution that allows for easier sperm micromanipulation by slowing or immobilising sperm for ICSI
- Indicated for use in low motility (or poor quality) human semen specimens during ART procedures which include human gamete and embryo manipulation
- Contains 5 mg/mL Human Serum Albumin (HSA)

Contact your rep →

Polyvinylpyrrolidone (PVP) with HSA – 10%

View ordering information →

Intended for immobilising human sperm to facilitate intracytoplasmic sperm injection (ICSI) when used in assisted reproductive technology (ART) procedures.

Product Description:

- A viscous solution that allows for easier sperm micromanipulation by slowing or immobilising sperm for ICSI
- Indicated for use in normal and high motility human semen specimens during ART procedures which include human gamete and embryo manipulation
- Contains 5 mg/mL Human Serum Albumin (HSA)

GM501 PVP

View ordering information →

Ready-to-use 10% PVP medium to reduce the motility of sperm, making it easier to catch them with an ICSI pipette.

Protein Supplements

Human Serum Albumin Solution (HSA)

View ordering information →

Intended for use in assisted reproductive procedures which include gamete and embryo manipulation, as a supplement for culture media. Not for use as an injectable product.

Product Description:

Consists of HSA (100 mg/mL) from a therapeutic-grade source material in a saline solution. This represents 10% total protein (weight/volume) in normal saline.

Contact your rep →

Cryopreservation

Vit Kit-Freeze

View ordering information →

Intended for use for vitrification and storage of human oocytes (MII), pronuclear (PN) zygotes through day 3 cleavage-stage embryos, and blastocyst-stage embryos when used in assisted reproductive technology (ART) procedures.

Product Description:

A flexible, cost-effective system for use in the vitrification of oocytes (MII), pronuclear (PN) zygotes, cleavage stage embryos, and blastocyst stage embryos. With survival rates ranging between 90-99%, and featuring low volume protocols, Vit Kit Freeze can support your laboratory by reducing the cost of vitrification and ensuring consistent, high-survival rates.

Equilibration Solution - ES is a HEPES buffered solution of Medium-199 containing Gentamicin Sulfate, 7.5% (v/v) of each DMSO and ethylene glycol, and 20% (v/v) Dextran Serum Supplement (DSS).

Vitrification Solution - VS is a HEPES buffered solution of Medium-199 containing Gentamicin Sulfate, 15% (v/v) of each DMSO and ethylene glycol, 20% (v/v) DSS, and 0.5 M sucrose.

- DSS is a protein supplement consisting of 50 mg/mL therapeutic grade Human Serum Albumin (HSA) and 20 mg/mL Dextran. DSS is used at 20% (v/v) in Vit Kit-Freeze for a final concentration of 10 mg/mL HSA and 4 mg/mL Dextran.
- These two solutions are to be used in sequence according to the step-wise microdrop vitrification protocol.

Vit Kit-Thaw

View ordering information →

Intended for use in the thawing of vitrified oocytes (MII), pronuclear (PN) zygotes through day 3 cleavage-stage embryos, and blastocyst-stage embryos that have been vitrified using Vitrification Freeze Kit (Catalog ID 90133-SO).

Product Description:

A flexible, cost-effective system for use in the thawing of oocytes (MII), pronuclear (PN) zygotes, cleavage stage embryos, and blastocyst stage embryos. With survival rates ranging from 90-99%, and featuring low-volume protocols, Vit Kit-Thaw can support your laboratory by reducing the cost of vitrification and ensuring consistent, high-survival rates.

Thawing Solution - TS is a HEPES buffered solution of Medium-199 containing gentamicin sulfate, 1.0 M sucrose, and 20% (v/v) Dextran Serum Supplement (DSS).

Dilution Solution - DS is a HEPES buffered solution of Medium-199 containing gentamicin sulfate, 0.5 M sucrose, and 20% (v/v) DSS.

Washing Solution - WS is a HEPES buffered solution of Medium-199 containing gentamicin sulfate and 20% (v/v) DSS.

- DSS is a protein supplement consisting of 50 mg/mL therapeutic grade Human Serum Albumin (HSA) and 20 mg/mL Dextran. DSS is used at 20% (v/v) in Vit Kit-Freeze for a final concentration of 10 mg/mL HSA and 4 mg/mL Dextran.
- These two solutions are to be used in sequence according to the step-wise microdrop vitrification protocol.

Vit Kit-Freeze NX

View ordering information →

Intended for use in the vitrification and storage of human oocytes (MII), pronuclear (PN) zygotes through day 3 cleavage-stage embryos and blastocyst-stage embryos when used in assisted reproductive technology (ART) procedures.

Product Description:

An adaptable, cost-effective system for use in the freezing of oocytes, pronuclear zygotes, cleavage-stage embryos, and blastocyst-stage embryos. Unlike many vitrification kits that feature a mono-buffered system and M199 base medium originally formulated for chick embryo fibroblasts, Vit Kit - Freeze NX is derived from current IVF media tailored specifically for human embryo culture.

Equilibration NX - ES is a dual-buffered solution (HEPES and MOPS) of Continuous Single Culture medium (CSCM) - containing gentamicin sulfate, 7.5% (v/v) of each DMSO and ethylene glycol, and 20% (v/v) Dextran Serum Supplement (DSS).

Vitrification NX - VS ia dual-buffered solution (HEPES and MOPS) of Continuous Single Culture medium (CSCM) containing gentamicin sulfate, 15% (v/v) of each DMSO and ethylene glycol, 20% (v/v) DSS, and 0.5 M trehalose.

Washing NX - WS is a dual-buffered solution (HEPES and MOPS) of CSCM containing gentamicin sulfate and 20% (v/v) DSS.

- DSS is a protein supplement consisting of 50 mg/mL therapeutic grade Human Serum Albumin (HSA) and 20 mg/mL Dextran. DSS is used at 20% (v/v) in Vit Kit - Freeze NX for a final concentration of 10 mg/mL HSA and 4 mg/mL Dextran.
- These solutions are to be used in sequence according to the step-wise microdrop vitrification protocol.

Vit Kit - Warm NX

View ordering information →

Intended for the thawing of vitrified human oocytes (MII), pronuclear (PN) zygotes through day 3 cleavage-stage embryos and blastocyst-stage embryos when used in assisted reproductive technology (ART) procedures.

Product Description:

An adaptable, cost-effective system for use in the thawing of oocytes, pronuclear zygotes, cleavage-stage embryos, and blastocyst-stage embryos. Unlike many vitrification kits that feature a mono-buffered system and M199 base medium originally formulated for chick embryo fibroblasts, Vit Kit - Warm NX is derived from current IVF media tailored specifically for human embryo culture.

Thawing NX - TS is a dual-buffered solution (HEPES and MOPS) of Continuous Single Culture Medium (CSCM) containing gentamicin sulfate, 20% (v/v) Dextran Serum Supplement (DSS), and 1.0M trehalose.

Dilution NX - DS is a dual-buffered solution (HEPES and MOPS) of Continuous Single Culture Medium (CSCM) containing gentamicin sulfate, 20% (v/v) DSS, and 0.5 M trehalose.

Washing NX - WS is a dual-buffered solution (HEPES and MOPS) of Continuous Single Culture Medium (CSCM) containing gentamicin sulfate and 20% (v/v) DSS.

- DSS is a protein supplement consisting of 50 mg/mL therapeutic-grade Human Serum Albumin (HSA) and 20 mg/mL Dextran. DSS is used at 20% (v/v) in Vit Kit - Warm NX for a final concentration of 10 mg/mL HSA and 4 mg/mL Dextran.
- These three solutions are to be used in sequence according to the step-wise microdrop thawing protocol.

Contact your rep →

Fast Warm - NX

View ordering information →

Intended for use in assisted reproductive procedures for the thawing of vitrified human blastocyst-stage embryos.

Product Description:

- >90% Protocol Time Reduction: Multi-step warming simplified to 1 minute, 1 step.
- No Solution Changes: Same trusted TS-NX formulation – just with a faster protocol.
- Flexible Packaging: Choose the same 2mL micro vials or new 20 mL bottles for efficiency and minimal waste.

GM501 GentleVit

View ordering information →

Set of ready-to-use media for vitrification and warming of human oocytes and embryos.

Up to 5 vitrification cycles (of the same patient) can be performed with one media set-up.

Freezing Medium - TYB

View ordering information →

Intended for cryopreservation of human semen when used in assisted reproductive technology (ART) procedures.

Product Description:

Freezing Medium TYB is indicated for use in ART procedures which includes the cryopreservation of human semen for use in assisted reproductive storage and future use in procedures which include insemination, in vitro fertilisation, or sperm analysis.

Arctic Sperm Cryopreservation Medium

View ordering information →

Intended for cryopreservation and storage of human sperm when used in assisted reproductive technology (ART) procedures.

Product Description:

- A dual-buffered solution containing HEPES and MOPS that provides a secure environment to maintain physiological pH while handling sperm pre- and post-thaw. The formulation contains vitamins and amino acids to help with post-thaw sperm recovery.
- Has a high glycerol concentration that uses less medium per application, requiring only a 1:3 ratio of medium to semen.
- Contains 20 mg/mL Human Serum Albumin (HSA).
- Free of TEST-yolk buffer (TYB) or other animal components.

GM501 SpermStore

View ordering information →

Medium for freezing human sperm including epididymal or testicular sperm.

Gamete & Embryo Handling

Multipurpose Handling Medium (MHM)

View ordering information →

Intended for use in assisted reproductive technology (ART) procedures which involve the manipulation of gametes or embryos. Specifically, MHM is indicated for use as an oocyte retrieval medium during ovarian follicle aspiration procedures (not for flushing ovarian follicles), washing sperm prior to IVF and ICSI fertilisation procedures, and for transport of the embryo to the uterus during embryo transfer procedures.

Product Description:

- A dual-buffered solution (HEPES and MOPS) that provides a safe and secure environment to maintain viability of gametes and embryos during manipulations under ambient conditions. It is a versatile solution for swim-up preparation, sperm washing, oocyte retrieval and rinsing, IUI, ICSI, and embryo transfer.
- Contains 10 µg/mL of the antibiotic gentamicin sulfate.
- Requires protein supplementation.

Contact your rep →

Multipurpose Handling Medium Complete (MHM-C)

View ordering information →

Intended for use in assisted reproductive technology (ART) procedures which involve the manipulation of human gametes and embryos. Specifically, MHM is indicated for use as an oocyte retrieval medium during ovarian follicle aspiration procedures (not for flushing ovarian follicles), washing sperm prior to IVF and ICSI fertilisation procedures, and for transport of the embryo to the uterus during embryo transfer procedures.

Product Description:

- A dual-buffered solution (HEPES and MOPS) that provides a safe and secure environment to maintain viability of gametes and embryos during manipulations under ambient conditions. It is a versatile solution for swim up preparation, sperm washing, oocyte retrieval and rinsing, IUI, ICSI, and embryo transfer.
- Contains 9.5 µg/mL of the antibiotic gentamicin sulfate.
- Contains 5 mg/mL Human Serum Albumin (HSA).

Modified HTF Medium with Gentamicin (mHTF)

View ordering information →

Intended for retrieval, handling, and/or transfer of human gametes, and embryos when used in assisted reproductive technology (ART) procedures.

Product Description:

- A synthetic, defined solution for procedures which include the retrieval, handling, and transfer of human gametes and embryos. mHTF is composed of a HEPES and sodium bicarbonate buffering system, making it ideal for use in ambient atmosphere conditions.
- Contains 10 µg/mL of gentamicin sulfate.
- Requires protein supplementation.

Hyaluronidase Solution

View ordering information →

Intended for use in removing cumulus cells surrounding human oocytes (denudation) in preparation for ICSI or other assisted reproductive technology (ART) procedures.

Product Description:

- An enzymatic solution containing 80 IU/mL of bovine-derived hyaluronidase in a HEPES buffered HTF medium supplemented with 5 mg/mL therapeutic-grade Human Serum Albumin (HSA)
- Contains 10 µg/mL of gentamicin sulfate

GM501 Hyaluronidase

View ordering information →

Ready-to-use solution designed to facilitate the mechanical removal of cumulus cells. Hyaluronidase digests the extracellular matrix in the cumulus-oocyte complex consisting of hyaluronic acid.

Oil for Embryo Culture

View ordering information →

Intended for use as an overlay to cover small volumes of culture media during human embryo and gamete manipulation.

Product Description:

A sterile light mineral oil intended for use as an overlay when culturing in reduced volumes of media to prevent evaporation, and to protect the media from changes in osmolality and pH.

GM501 MineralOil

View ordering information →

Used to cover the medium during culturing and/or micro-manipulation of human gametes and embryos During invitro fertilisation (IVF), intra-cytoplasmatic sperm injection (ICSI), and related assisted reproductive technologies (ART) Packaged in glass bottles.

Product Description:

GM501 Mineral Oil can be used to cover the medium during culturing and/or micro-manipulation of human gametes and embryos.

Dulbecco's Phosphate Buffered Saline Solution (PBS 1X)

View ordering information →

Intended for use in assisted reproductive procedures which include retrieval, handling and transfer of gametes and embryos.

Product Description:

A synthetic, defined solution for procedures which include the retrieval, handling, and transfer of human gametes and embryos.

Contact your rep →

GM501 Flush

View ordering information →

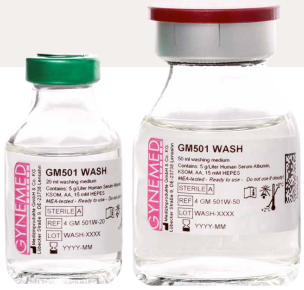

Ready-to-use medium for flushing the ovarian follicles during aspiration and/or oocyte pick-up intended for extracorporeal fertilisation procedures.

GM501 Wash

View ordering information →

Ready-to-use medium designed for washing procedures of human oocytes and embryos and any short-term handling procedures outside the incubator like washing after Hyaluronidase treatment (denudation), ICSI, polar body or blastomere biopsy and others. Available with Phenolred and Gentamicin (WashPRG) or without Phenolred and Gentamicin.

In Vitro Diagnostics

GM508 CultActive

View ordering information →

Reagent designed to investigate if fertilisation failure after previous ICSI-cycles is due to a deficient oocyte activation. For In Vitro Diagnostic Use.

GM501 SpermMobil

View ordering information →

HEPES-buffered reagent containing low bicarbonate. It is used for in-vitro examination of sperms of necrozoospermic ejaculates as well as of immotile sperms isolated from testicular tissue (TESE). The product is specifically designed to temporarily initiate motility of immotile spermatozoa for diagnosis of vitality of sperm cells. For In Vitro Diagnostic Use.
